Medical system symptoms

- A. **Disruption of identity characterized** by two or more distinct personality states, which may be described in some cultures as an experience of possession. The disruption in identity involves marked discontinuity in sense of self and sense of agency, accompanied by related alterations in affect, behavior, consciousness, memory, perception, cognition, and/or sensory-motor functioning. These signs and symptoms may be observed by others or reported by the individual.
- B. **Amnesia** Recurrent gaps in the recall of everyday events, important personal information, and/or traumatic events that are inconsistent with ordinary forgetting.
- C. **Distress** The symptoms cause clinically significant distress or impairment in social, occupational, or other important areas of functioning.
- D. The disturbance is not a normal part of a broadly accepted cultural or religious practice.

Note: In children, the symptoms are not better explained by imaginary playmates or other fantasy play.

Shes a cynical bitch who's resentful of the whole world. She's also a wide eyed princess who sees everything through rose tinted glasses. How does she do it all you might ask ? That's easy ! With dissociative identity disorder !!

STUFF LIKE THAT.

PROBLEM IS THAT
MY IMPLUSIVE SIDE

Tip: You can successfully relate to others by making yourself into a copy of them over the course of a few conversations, and then simply re-assuming that form whenever you speak to them!

Sometimes being a system is like “most of my life is gone. I have nothing to prove what happened other than the symptoms I experience. I feel isolated and scared because of this, and nobody seems to understand.”

And sometimes it’s like “ouuuuiieee we have a tbh creature fictive named Yippee who we can hug in headspace when we’re stressed out :333”
